PRO

An Invitation to Sponsor **CogPro**

CogPro Cognitive Prosthetics Ltd. is an innovative R&D company based in Halifax, NS. We're focused on improving day-to-day life for people living with Alzheimer's disease in their own homes, and their coping caregivers.

We develop small household electronic devices designed to improve the quality of life for those concerned. We have a unique focus and technology; our devices are deeply familiar in appearance and work with a habitual gesture. The first of these is our Jeeves™ Thermostat.

To market by early 2018

An action-oriented organization, CogPro aims to deliver real solutions to millions of people who need and can use our products —the sooner the better. From our research of online discussion groups, we know that a safe and satisfying solution to thermostat “fiddling” is in high demand. We are set to have our Jeeves™ Thermostat Model 1 in the homes of everyday users by early 2018.

Sponsor value

Alzheimer's disease is aging-related. Canada and many other countries are experiencing a rapid aging of the population. This trend will accelerate over the coming years, as baby boomers reach retirement age. This “elder space” presents a significant area of interest and activity. Our development could well be in sync with your current or long-term plans related to this sector.

Sponsor options

All levels of support will make a real and immediate difference for families coping with Alzheimer's disease. All sponsors will receive CogPro's public recognition of their support.

1. Investor-Sponsor: provide major financial support of CogPro's vision. Your long-term benefits include owning part of CogPro Cognitive Prosthetics Ltd.
2. Sponsor: provide financial support, or support in-kind, for CogPro's vision.
3. Champion: lend your name in support of our mission.

Sponsoring CogPro will provide support for

- Our short-term objective: our Jeeves™ Thermostat on the market by early 2018.
- Our long-term objectives: developing other appliances (e.g. telephones, radios, TVs), as well as the next generation of thermostat.

We invite you to follow our development as we turn our ideas into the best, most user-friendly smart devices the world has seen.
