

I'm so afraid Mom is going to get hypothermia by fiddling with the thermostat.

The locked box just makes him so angry.

Is it too much to ask for a simple thermostat that anybody can use?

Tom's always cold and keeps the furnace blasting all winter. Our heating bill is through the roof!

These thermostat wars are like a constant ping pong game!

Introducing the **Jeeves™ Thermostat Model 1.0** from CogPro, the ultimate in user-friendly interface.

Jeeves is a smart thermostat that works for everyone in any old house with electricity and a telephone — no Wi-Fi needed.

Designed for people living in their own homes with Alzheimer's disease, Jeeves ensures a safe, stress-free and satisfying quality of life for both the user and the caregiver.

Unlike other smart thermostats, CogPro's Jeeves™ Thermostat is deeply familiar in appearance and operation, so there's nothing new to learn. The device ignores "fiddling" and allows the user to safely control their own comfort level within a programmed range of heat settings, so it can never be too hot or too cold.

The caregiver is able to monitor the usage tracked by the thermostat — from a computer, tablet or phone in the same room or across the continent — and respond to alerts sent by the device.

Reserve your CogPro Jeeves™ Thermostat now.

Be among the first to own this revolutionary smart thermostat (expected shipping date December 2017.)

A refundable C\$27 deposit toward a Jeeves™ Thermostat Model 1, taxes and shipping included, will place you at the top of our waiting list. In the meantime, we invite you to follow our development and contribute to our final design as we turn our ideas into the best, most user-friendly smart thermostat the world has seen.
