

The Jeeves™ Thermostat Model 1 is an energy saving programmable thermostat. Designed for users living with Alzheimer's disease in their own homes, it replaces low voltage (24V) heat-only manual or programmable thermostats, and will work in any old or new house — no Wi-Fi required.

Everyday users, whether or not Alzheimer's disease is present, will find nothing unfamiliar in the Jeeves™ Thermostat.

- A decades-old habitual gesture turns the heat up or down.
- Jeeves prevents most types of mistakes everyday users tend to make. It ignores "fiddling."
- Jeeves' embedded smarts tracks what's happening. It logs both the room's temperature and the everyday user's actions.
- Jeeves sends alerts when it detects problems, even if the power has failed.
- Programming Jeeves is simple with CogPro's user-friendly interface on a computer, tablet, or smart phone – wirelessly, in the same room, or from the other side of the country.
- If the person responsible for setting the program doesn't have a computer or doesn't want the task, a call to CogPro's real, live support operator will take care of it.

Jeeves™ Thermostat operating logic

- Jeeves runs its programmed time-of-day schedule of settings without actively calling attention to itself.
- Users can turn the heat up or down at any time.
- A user gesture changes the programmed setting one step, up or down. This is a "boost."
- Jeeves' display light shows that a boost is ON.
- Until the room reaches the boosted setting, any user gestures are ignored, thus fiddling is prevented.
- After the boosted room temperature is reached, the display light turns off. If a user wants it still warmer (or cooler), their gesture can boost it up again (or down).
- The number of repeated boosts is limited, so that the room won't reach unsafe and heat-wasting highs or illness-causing lows. (Anything under 60° F can cause hypothermia, which can lead to illness and death.)
- Boosted settings are temporary. After 90 minutes, the setting returns to the temperature programmed for that time of day.
- When it detects problems, the Jeeves hub sends alerts to designated caregivers via text or voice message or email.

The Jeeves™ Thermostat Model 1 system — ready to go, out of the box

- Jeeves thermostat
- Jeeves hub

- registration and programming information
- the CogPro User Satisfaction Warranty

Jeeves thermostat

Our Jeeves dome measures the room temperature and controls the heating system. The thermostat meets CSA/UL and FCC electrical standards.

Jeeves hub

- The hub is a sealed module, the real brains of the Jeeves™ Thermostat system, with its 48-hour backup battery.
- This discrete box plugs into a 120V AC outlet elsewhere in the home.
- It establishes a secure wireless connection to the Jeeves thermostat and to the CogPro support Cloud.
- All user interactions and environmental events are recorded and analyzed by the hub.
- Alerts are relayed to designated caregivers through text or voice messaging or email.

Installation and setup

- Remove the old thermostat and disconnect its wires.
- Replace it with the Jeeves dome thermostat.
- Plug in the Jeeves hub to an outlet in a different room; the setup process will start immediately.
- The hub connects itself to the Jeeves thermostat and to the CogPro Cloud when first plugged in.
- Time zone, time, date, and temperature scale (°C for locations in Canada, °F for US) are set in the hub.
- Normal = 21° C/70° F
- EcoSetback (nights) = 18° C/65° F
- Boost (one step up or down) = ±2° C/3 ° F
- Between 1 and 3 boosts allowed
- Timed re-set to normal program = 90 minutes

Registration and programming

- Setup starts registration of your thermostat and hub with CogPro. Phone the toll-free support number to complete your registration and setup.
- User-friendly web browser interface
- Secure log-in for each Jeeves™ Thermostat
- Programming controls include settings for:
 - normal, EcoSetback, vacation
 - daily, weekly (schedule up to 6 changes a day)
 - long term (vacation and seasonal settings)
 - boost steps (how big, how many)
- add or change phone numbers, email addresses to receive Jeeves' alerts
- default back-up by CogPro Support
